
INTERNATIONAL

COMET QUARTERLY

Whole Number 113

JANUARY 2000

Vol. 22, No. 1

SMITHSONIAN ASTROPHYSICAL OBSERVATORY
60 Garden Street • Cambridge, MA 02138 • U.S.A.

The International Comet Quarterly (*ICQ*) is a journal devoted to news and observation of comets, published by the Smithsonian Astrophysical Observatory in Cambridge, Massachusetts. Regular issues are published 4 times per year (January, April, July, and October), with an annual *Comet Handbook* of ephemerides published normally in the first half of the year as a special fifth issue. An index to each volume normally is published in every other October issue (odd-numbered years); the *ICQ* is also indexed in *Astronomy and Astrophysics Abstracts* and in *Science Abstracts Section A*.

The regular (invoiced) subscription rate is US\$31.00 per year for surface-mail delivery (price includes the annual *Comet Handbook*; the price without the *Handbook* is US\$23.00 per year). Subscribers who do not wish to be billed may subscribe at the special rate of US\$23.00 per year for surface-mail delivery (rate is \$15.00 without *Handbook*). Add \$15.00/year to each of these rates for airmail delivery outside of the United States or for first-class delivery within the U.S. [The last set of digits (after the hyphen) on the top line of the mailing address label gives the Whole Number that signifies the last *ICQ* issue which will be sent under the current subscription status. An asterisk after these numbers indicates credit for the next annual *Comet Handbook*. The first five digits represent the subscriber's account number.] Make checks or money orders payable in U.S. funds (and drawn on a U.S. bank) to *International Comet Quarterly* and send to Mail Stop 18; Smithsonian Astrophysical Observatory; 60 Garden St.; Cambridge, MA 02138, U.S.A.

Credit cards may be used for payment of subscriptions, though a minimum of US\$20.00 can be accepted for each charge. Credit-card orders may be placed by e-mail (to isusubs@cfa.harvard.edu), by fax (to USA 617-495-7231), or by telephone (to USA 617-495-7280, generally between 14:00 and 21:00 UT, Monday to Friday). When sending orders by fax or e-mail, please include the following information: (1) your name (as given on the credit card); (2) card type (MasterCard, Visa, or Discover); (3) credit-card number and expiration date; (4) address at which the card is registered; (5) which services you wish to subscribe to; (6) if the payment is for the renewal of a current or expired account, please include your account number.

Group subscription rates available upon request. Back issues are \$6.00 each — except for "current" *Comet Handbooks*, which are available for \$15.00 (\$8.00 to subscribers if ordered with their *ICQ* subscription; see above). Up-to-date information concerning comet discoveries, orbital elements, and ephemerides can be obtained by subscribing to the *IAU Circulars* and/or the *Minor Planet Circulars* (via postal mail and also available via computer access); for further information, contact the above e-mail address (or the *ICQ* at the above postal address).

Cometary observations should be sent to the Editor in Cambridge; all data intended for publication in the *ICQ* that is not sent via computer electronic mail should be sent on standard *ICQ* observation report forms, which can be obtained upon request from the Editor. Those who can send observational data (or manuscripts) in machine-readable form are encouraged to do so [especially through e-mail via the computer networks SPAN (6700::DAN) or Internet (ICQ@CFA.HARVARD.EDU), or via floppy disks that can be read on an IBM PC], and should contact the Editor for further information. The *ICQ* has extensive information for comet observers on the World Wide Web, including the Keys to Abbreviations used in data tabulation (see URL <http://cfa-www.harvard.edu/icq/icq.html>). In early 1997, the *ICQ* published a 225-page *Guide to Observing Comets*; this edition is now out of print, but a revised edition is under preparation.

Most of the Observation Coordinators (OCs) listed below have e-mail contacts with the *ICQ* Editor; observers in the general area of such OCs who lack access to e-mail networks may send data to the OC for relay to the *ICQ* in electronic form.

ICQ EDITORIAL STAFF:

Daniel W. E. Green.....Editor	Charles S. Morris.....Associate Editor
Syuichi Nakano..... <i>Comet Handbook</i> Editor	

OBSERVATION COORDINATORS:

AUSTRALIA	Paul Camilleri (51 Mookarri Street; Cobram 3644, Victoria); David A. J. Seargent
BELARUS	Sergey E. Shurpakov (Flat 22; 1 Korban Street; 211011 Baran)
BRAZIL	José Guilherme de S. Aguiar (R. Cândido Portinari, 241; 13089-070 - Campinas - S.P.)
BULGARIA	Veselka Radeva (Astronomical Observatory and Planetarium; P.O.B. 120; 9000 Varna)
CHINA	Chen Dong Hua (101 Quan Zhou Road; Gulangyu, Xiamen 361002)
CZECH REPUBLIC	Petr Pravec (Astronomical Institute; CS-25165 Ondřejov); Vladimir Znojil
FRANCE	Stephane Garro (Horizon 1800; Batiment A; 05170 Orcieres-Merlette)
GERMANY	Andreas Kammerer (Johann-Gregor-Breuer-Str. 28; 76275 Ettlingen)
HUNGARY	Krisztián Sárneczky (Vécsey u. 10; H-1193 Budapest)
ITALY	G. Antonio Milani (Dip. Scienze Biomediche; via Trieste 75; 35121 Padova)
JAPAN	Akimasa Nakamura (P.O. Box 9, Kuma Post Office; Kuma-cho, Ehime 791-1201)
THE NETHERLANDS	Alex Scholten (Horsterdijk 6a; NL-6961 KP Eerbeek)
NEW ZEALAND	Alan C. Gilmore and Pamela Kilmartin (P.O. Box 57; Lake Tekapo 8770)
NORWAY	Bjoern H. Granslo (Postboks 1029; Blindern; N-0315 Oslo 3)
POLAND	Janusz Pleszka and Tomasz Sciezor (Faculty of Physics and Nuclear Technique; University of Mining and Metallurgy; Al. Mickiewicza 30; 30-059 Cracow)
PORUGAL	Alfredo Pereira (R. Antero de Quental 8, 2 dto; Carnaxide; 2795 Linda-a-Velha)
SLOVENIA	Herman Mikuž (Kersnikova 11; 61000 Ljubljana)
SOUTHERN AFRICA	Tim Cooper (P.O. Box 14740; Bredell 1623; Kempton Park; South Africa)
SPAIN	Jose Carvajal Martinez (San Graciano 7; 28026 Madrid)
SWEDEN	Joergen Danielsson (Hasselstigen 2D; 386 00 Farjestaden)
UKRAINE	Alexandr R. Baransky (Komarovka 12; Vladimir — Volynsky; Volynska 264940)
UNITED KINGDOM	Jonathan Shanklin (11 City Road; Cambridge CB1 1DP; England) Guy M. Hurst (16 Westminster Close; Kempshott Rise; Basingstoke, Hants RG22 4PP; England)
former U.S.S.R.	Klim I. Churyumov (Astronomical Observatory; Kiev University; Observatorna 3; Kiev 254053; Ukraine)

EDITORIAL ADVISORY BOARD:

Michael F. A'Hearn, University of Maryland	Michel Festou, Observatoire Midi-Pyrénées, Toulouse
Brian G. Marsden, Harvard-Smithsonian Center for Astrophysics	
David D. Meisler, State University College of New York, Geneseo	Thomas L. Rokoske, Appalachian State University
Zdenek Sekanina, Jet Propulsion Laboratory, California Institute of Technology

EDITORIAL NOTICE.

In 1999, the Minor Planet Center and Central Bureau for Astronomical Telegrams adopted a new scheme whereby 'P/' designations for one-apparition comets are given only to comets whose orbital periods are generally under 30 years (there being a current large gap between 25 and 42 yr for unnumbered short-period comets). Over the last few decades, astronomers had come to consider short-period comets as those with periods under 200 yr, but there is no real dynamical reason to have an artificial boundary there. So, while the *ICQ* continued with the 200-yr 'P/' criterion in 1999, we immediately change in order to be compliant with the MPC/CBAT system.

Letter to the Editor: The 'Deep Impact' Mission

Ball Aerospace has been awarded a contract to build the Deep Impact spacecraft, which will consist of an observer spacecraft and an impactor (see <http://www.ball.com/aerospace/deepimpact.html>). The impactor is scheduled to hit comet 9P/Tempel 1 on 2005 July 4. I am assisting Dr. Lucy McFadden, University of Maryland, in setting up an amateur-observer network to obtain as much data on comet 9P as we can prior to the impact.

We are looking for advanced CCD observers to start monitoring the comet in March of this year. We feel that the minimum requirement for obtaining useful observations of this comet are as follows: Telescope with a minimum aperture of 25 cm, a good quality CCD camera, "standard" *V* and *R* filters, and a good working knowledge of CCD image calibration. The observations can be transmitted to the University of Maryland and will be posted on an observer web-page there.

We would appreciate any assistance that observers can give us. Potential observers can contact us via e-mail at gemerson@ball.com or mcfadden@astro.umd.edu.

— Gary Emerson (Systems Engineer, Ball Aerospace)

EDITORIAL NOTE: The special Proceedings issue for the IWCA II has been postponed to the July issue, due to the large amount of editing necessary for numerous papers.

Tabulation of Comet Observations

Due to time constraints, those observations contributed for this issue on paper will appear in the April issue.

We have added a new code for CCD observations obtained by K. Kadota at Ageo, Saitama, Japan, and measured by S. Yoshida: YOS05. We formerly gave this as YOS04, but now YOS04 is only used for the photometry obtained entirely by Yoshida (usually visual). Note that the team of Kadota/Yoshida has been involved in previous CCD observations published in the *ICQ* under code YOS04 (as has been occasionally stated in the Descriptive Information).

Descriptive Information, to complement the Tabulated Data (all times UT):

- ◊ Comet C/1995 O1 (Hale-Bopp) ⇒ 1999 Dec. 4: "outburst has dissipated somewhat, and comet has faded; at 180×, coma appears quite flat, both in texture and cond., resembling a circular disk" [RAE].
- ◊ Comet C/1998 K2 (LINEAR) ⇒ 1999 Dec. 3.61: GUIDE 7.0 software used for photometry [NAK01].
- ◊ Comet C/1998 M3 (Larsen) ⇒ 2000 Feb. 5.2 and 7.2: "w/ 1.52-m f/8 telescope (+ Tektronics TK1024AB CCD + Johnson *R* filter; 0''.4/pixel) at the National Astronomical Observatory, Calar Alto, Spain, we lacked the ability to track on the object, and had to expose longer than the rate of motion of the comet allowed, considering the seeing conditions (1''.5 at both nights); yet we clearly detected the comet's motion by comparing individual images taken at different times, and though we were not able to obtain any confident measurements of the comet's magnitude because of the low surface density of the coma, we found a rough estimation of the coma diameter in the direction ⊥ to its motion to be 20'' (50 pixels), which corresponds to 10⁵ km at a geocentric distance of 6.9 AU" [P. B. Lacerda (Obs. Astron. of Lisbon, Portugal), N. Peixinho (Inst. Astroph. of Granada, Spain), Maarten Roos-Serote (Observatorio Astronomico de Lisboa)].
- ◊ Comet C/1998 P1 (Williams) ⇒ 1999 Apr. 16.93: comet not seen; "conservative *m₁* estimate, as I did not have access to faint comparison chart"; alt. 23° [WAR01].
- ◊ Comet C/1999 H1 (Lee) ⇒ 1999 Sept. 4.91: "in the outer coma is the bright star TT 3750.00822 (mag 9.8), which disturbed obs." [LEH]. Sept. 9.05, 12.03, and Oct. 17.06: software Megastar 4.0 (GSC 1.1) used for ref (Hipparcos/Tycho comparison stars) [LEP]. Sept. 9.05 and 12.03: w/ 14-cm D, 6-min exp. on TP 2415H emulsion shows anti-tail 0°.5 long in p.a. 99° [LEP]. Oct. 1.82: comet only ≈ 2° from C/1999 S3 [LEH]. Oct. 12.83: w/ 8-cm R, "comet barely visible (visibility clearly inferior to NGC 205)"; w/ 20-cm T, comet faint faint, but clearly seen [GRA04]. Oct. 16.86: not visible with 7.0-cm R [GRA04]. Oct. 28.40: GUIDE 6.0 software used for photometry [NAG08]. Oct. 31.74: comet involved w/ 12th-mag star [MEY]. Nov. 2.85: comet enhanced w/ Swan-band filter [MOR09]. Nov. 8.78, 25.74, and 27.75: "beginning 1999 June 23, I stopped using the USNO-A magnitudes and started using Mikuž's system; I now use an ST-7 CCD, binned 2×2, with all comparison stars extracted from catalogue on CD-ROM Guide 6.0" [LIG]. Nov. 9.49: GUIDE 7.0 software used for photometry [YOS02].

- ◊ Comet C/1999 J2 (*Skiff*) ⇒ 1999 Nov. 10.39: GUIDE 7.0 software used for comparison-star mags [NAK01].
- ◊ Comet C/1999 J3 (*LINEAR*) ⇒ 1999 July 17.95: “outburst?; slight enhancement w/ a Lumicon Swan Band Filter” [MEY]. Oct. 15.17: “only faintly visible due to thin clouds and low alt.” [GRA04]. Nov. 20.40: severe moonlight interference [RAE]. Dec. 16.61: comet has faded considerably since last obs.; comet barely brighter than background sky [RAE].
- ◊ Comet C/1999 K8 (*LINEAR*) ⇒ 1999 Nov. 6.86: comet close to star of 12th mag [BOU]. Nov. 10.84: comet close to star of 14th mag [BOU].
- ◊ Comet C/1999 L3 (*LINEAR*) ⇒ 1999 Dec. 17.85: GUIDE 7.0 software used for comparison-star mags [YOS02].
- ◊ Comet C/1999 N2 (*Lynn*) ⇒ 1999 Aug. 1.85: comet looks like globular cluster [LEH].
- ◊ Comet C/1999 S3 (*LINEAR*) ⇒ 1999 Oct. 31.75: bright and starlike central cond. surrounded by a faint outer coma [MEY]. Nov. 2.31: in 25.6-cm f/5 L (169×), starlike nucleus of mag ≈ 14.5, w/ 2' tail in p.a. 110° [BIV]. Nov. 8.79, 25.77, 27.78, 29.83, Dec. 6.82, and 30.79: “beginning 1999 June 23, I stopped using the USNO-A magnitudes and started using Mikuž’s system; I now use an ST-7 CCD, binned 2×2, with all comparison-star mags extracted from catalogue on CD-ROM Guide 6.0” [LIG]. Nov. 9.57 and Dec. 11.49: GUIDE 7.0 software used for comparison-star mags [YOS02]. Nov. 27.81: “comet barely visible, but seen at correct location; m_1 deduced from the AAVSO SS Cyg seq.” [GRA04]. Nov. 28.40: GUIDE 6.0 software used for comparison-star mags [NAG08].
- ◊ Comet C/1999 S4 (*LINEAR*) ⇒ 1999 Nov. 6.96: “reality (and motion) of observed object confirmed in 50-cm reflector at 226×”; all obs. Nov. 6-17 from MPC station 965 in Poio, Portugal [BOU]. Nov. 7.87-Dec. 30.80: “beginning 1999 June 23, I stopped using the USNO-A magnitudes and started using Mikuž’s system; I now use an ST-7 CCD, binned 2×2, with all comparison-star mags extracted from catalogue on CD-ROM Guide 6.0” [LIG].
- ◊ Comet C/1999 T2 (*LINEAR*) ⇒ 1999 Dec. 9.08: central cond. of dia. 3'' and mag 17.3; coma was symmetrical with an uncertain hint of a very faint, short tail in p.a. 103° [ROQ].
- ◊ Comet C/1999 U4 (*Catalina-Skiff*) ⇒ 1999 Nov. 3.13: central cond. of dia. < 3'' and mag 17.0; coma appeared symmetrical and sharply bounded [ROQ]. Dec. 6.08: central cond. of dia. < 2'' and mag 17.7; coma appeared faint and very diffuse, but symmetrical [ROQ].
- ◊ Comet 10P/*Tempel 2* ⇒ 1999 Nov. 1.51 and 7.43: GUIDE 7.0 software used for comparison-star mags [YOS02].
- ◊ Comet 37P/*Forbes* ⇒ 1999 July 11.00: suspected object at predicted position; low alt., clouds, and incoming twilight prevented confirmation [MEY].
- ◊ Comet 59P/*Kearns-Kwee* ⇒ 1999 Nov. 19.76: w/ 18-cm f/5.5 reflector + CCD, wide tail toward W [YOS05].
- ◊ Comet 63P/*Wild 1* ⇒ 1999 Nov. 30.85: seems to have a tail [YOS05].
- ◊ Comet 106P/*Schuster* ⇒ 1999 Sept. 1.55: CCD image w/ 1.0-m f/8 reflector shows 15'' coma, diffuse tail 50'' long in p.a. 275°; mag = 16.5R using USNO-A2.0 catalogue (“apart from the fact that the magnitudes in this [catalogue] are poor, I’m not sure what form of magnitude I’m measuring; I’d doubt m_2 was that bright, m_1 could be”) [Robert H. McNaught, Siding Spring Observatory]. Nov. 9.47: GUIDE 7.0 software used for comparison-star mags [YOS02]. Nov. 28.52: wide tail [YOS05]. Dec. 2.08: central cond. of dia. > 2'' and mag 15.5; coma was somewhat asymmetrical toward the tail; tail appeared diffuse with an embedded, narrow core centered along the initial 35'' of its length [ROQ]. Dec. 12.05: central cond. of dia. > 2'' and mag 15.4; coma appeared asymmetrical in p.a. 69°; the main body of the tail was diffuse with a narrow central core that extended over 135'' along the initial portion of the diffuse-tail length [ROQ].
- ◊ Comet 114P/*Wiseman-Skiff* ⇒ 1999 Nov. 5.10: central cond. of dia. 3'' and mag 16.0; coma appeared symmetrical at all brightness levels w/o apparent substructure [ROQ]. Nov. 21.53 and 28.59: seems to have a tail [YOS05]. Dec. 13.07: central cond. of dia. > 2'' and mag 14.8; the coma was slightly asymmetrical in p.a. 90°, w/o internal structure [ROQ]. Dec. 30.81: “beginning 1999 June 23, I stopped using the USNO-A magnitudes and started using Mikuž’s system; I now use an ST-7 CCD, binned 2×2, with all comparison stars extracted from catalogue on CD-ROM Guide 6.0” [LIG].
- ◊ Comet 141P/*Machholz 2* ⇒ 1999 Oct. 28.23, Nov. 2.24, and 8.23: “obs. of component A quite difficult and somewhat uncertain, but apparently no faint background stars (from Digital Sky Survey) were at this precisely predicted place for the comet” [BIV]. Oct. 31.74: “obs. in Oct. 1999 ICQ 99 (Whole No. 112) of component A; at the time of observation I didn’t know of the recovery of component D” [HAS02]. Nov. 2.41: CCD image w/ 1.0-m f/8 reflector shows that “fragment D has brightened dramatically in the last 2 weeks and is now very significantly brighter than fragment A; fragment A is still brightening only very slowly; I searched ≈ 40' beyond D along the line of variation, but there was nothing visible to about a mag fainter than that of A” [Robert H. McNaught, Siding Spring Observatory]. Nov. 3.4 and following dates: “CCD frames showed no trace of fragment A; on Nov. 10.4 frames, I barely saw a very faint ‘patch’ at the predicted position of A, but it was impossible to get any astrometry due to its faintness and crowded field stars (it was in the Milky Way!); bad weather and moonlight didn’t allow me to observe it for 20 days, and both fragments changed dramatically their brightness and figure (central cond.); on Nov. 30 frames, fragment A was bright, whereas D was completely diffused and impossible to get astrometry of; although D was diffuse (I couldn’t specify where the center was!), it was clearly visible and I measured the brightness; on Dec. 3 and 8, the situation was same” [NAK01]. Nov. 7.24 and 8.22: “component D clearly seen (in contrast to nucleus A)” on these dates, and likely also

($m_1 \approx 13$) on Nov. 2.24" [BIV]. Nov. 8.82, 9.82, and 10.81: "not 100% certain about reality of observed fragment A; low altitude and generally poor seeing, but during brief moments of good seeing, suspect remained diffuse; on Nov. 10, Bev Ewen-Smith was taking simultaneous CCD frames with a 15-cm telescope, and the marginal frames show that the comet appeared faintly visible near the expected position, where I also had seen it visually (a check with the Digital Sky Survey was not entirely convincing in this crowded field, but there appeared to be nothing stellar/nebular brighter than mag 15-16 where we saw/imaged the comet, so I assume that it was indeed the comet that I had seen)" [BOU]. Nov. 10.42, Dec. 3.40, 8.40: GUIDE 7.0 software used for comparison-star mags [NAK01]. Nov. 12.70: w/ 25.4-cm f/1.8 D + Kodalith orthochromatic film, component A shows 1'.5 coma and mag 13.3; component D shows 2'.5 coma and mag 12.0 [Michael Jäger near Vienna, Austria]. Nov. 26.22: w/ 25.6-cm L (84 \times), "component D seen under not-very-good sky conditions; component A may not have been significantly brighter" [BIV]. Nov. 26.68: w/ 25.4-cm f/1.8 D + Kodalith orthochromatic film, component A shows 2' coma and mag 11.8; component D shows 2'.5 coma and mag 12.3 [Michael Jäger near Vienna, Austria]. Nov. 26.71: comet close to 10th-mag star; brightness of suspect probably underestimated [MEY]. Nov. 27.22: w/ 25.6-cm L (84 \times), "under clearer skies, component A was brighter and more condensed than component D" [BIV]. Nov. 27.23: w/ 25.6-cm L (84 \times and 169 \times), components A and D clearly seen, both elongated in p.a. 60° (comp. A brighter, larger, and more condensed)" [BIV]. Nov. 27.68: w/ 25.4-cm f/1.8 D + Kodalith orthochromatic film, component A shows 2'.5 coma and mag 11.7; component D shows 2'.5 coma and mag 12.0 [Michael Jäger near Vienna, Austria]. Nov. 27.73: "we definitely observed at the location of component A, though the obs. was difficult; Michael Jaeger has photographed component A at mag \approx 14 at this position" [HAS02]. Nov. 28.39 and Dec. 11.38: GUIDE 6.0 software used for comparison-star mags [NAG08]. Nov. 30: very faint object not enhanced by Swan Band filter [SEA].

Dec. 8.68: w/ 25.4-cm f/1.8 D + Kodalith orthochromatic film, component A shows 2'.5 coma and mag 10.8; component D shows 2' coma and mag 12.0 [Michael Jäger near Vienna, Austria]. Dec. 9.68: w/ 25.4-cm f/1.8 D + Kodalith orthochromatic film, component A shows 2'.7 coma and mag 10.8; component D shows 2' coma and mag 12.0 [Michael Jäger near Vienna, Austria]. Dec. 11.43: GUIDE 7.0 software used for comparison-star mags [YOS02]. Dec. 11.68: w/ 25.4-cm f/1.8 D + Kodalith orthochromatic film, component A shows 3' coma and mag 10.6; component D shows 2'.5 coma and mag 11.8; "over ten nights from Nov. 26 to Dec. 11, component A brightened \approx 1.5 mag, while component D remained close to mag 12.0 ± 0.3 (only the inner coma changed); there was generally a moderately condensed inner coma of diameter \approx 1' with a faint outer halo up to 2.5 in diameter; most photos show a faint trail of material linking A and D" [Michael Jäger near Vienna, Austria]. Dec. 23.39: clouds hampered m_1 est. [YOS04]. Dec. 29.99: Guide v.07 software used for ref. stars [DES01]. Dec. 30.25: w/ 25.6-cm L (84 \times and 169 \times), component A bright and large, but D seen at the limit [BIV].

◊ Comet 142P/Ge-Wang \Rightarrow 1999 Sept. 14: "I scanned over a region covering $\approx \pm 4$ days to our usual limiting mag of ≈ 21.0 (conservatively above our actual threshold); I didn't see the comet, though I looked pretty thoroughly" [SCO01].

◊ ◊ ◊

TABULATED DATA

The headings for the tabulated data are as follows: "DATE (UT)" = Date and time to hundredths of a day in Universal Time; "N" = notes [* = correction to observation published in earlier issue of the *ICQ*; an exclamation mark (!) in this same location indicates that the observer has corrected his estimate in some manner for atmospheric extinction (prior to September 1992, this was the standard symbol for noting extinction correction, but following publication of the extinction paper — July 1992 *ICQ* — this symbol is only to be used to denote corrections made using procedures different from that outlined by Green 1992, *ICQ* 14, 55-59, and in Appendix E of the *ICQ Guide to Observing Comets* — and then only for situations where the observed comet is at altitude $> 10^\circ$); '&' = comet observed at altitude 20° or less with no atmospheric extinction correction applied; '\$' = comet observed at altitude 10° or lower, observations corrected by the observer using procedure of Green (*ibid.*); for a correction applied by the observer using Tables Ia, Ib, or Ic of Green (*ibid.*), the letters 'a', 'w', or 's', respectively, should be used].

"MM" = the method employed for estimating the total (visual) magnitude; see article on page 186 of the Oct. 1996 issue [B = VBM method, M = Morris method, S = VSS or In-Out method, I = in-focus, C = unfiltered CCD, c = same as 'C', but for 'nuclear' magnitudes, V = electronic observations — usually CCD — with Johnson V filter, etc.]. "MAG." = total (visual) magnitude estimate; a colon indicates that the observation is only approximate, due to bad weather conditions, etc.; a left bracket ([]) indicates that the comet was not seen, with an estimated limiting magnitude given (if the comet IS seen, and it is simply estimated to be fainter than a certain magnitude, a "greater-than" sign (>) must be used, not a bracket). "RF" = reference for total magnitude estimates (see pages 98-100 of the October 1992 issue, and Appendix C of the *ICQ Guide to Observing Comets*, for all of the 1- and 2-letter codes). "AP." = aperture in centimeters of the instrument used for the observations, usually given to tenths. "T" = type of instrument used for the observation (R = refractor, L = Newtonian reflector, B = binoculars, C = Cassegrain reflector, A = camera, T = Schmidt-Cassegrain reflector, S = Schmidt-Newtonian reflector, E = naked eye, etc.). "F/" and "PWR" are the focal ratio and power or magnification, respectively, of the instrument used for the observation — given to nearest whole integer (round even); note that for CCD observations, in place of magnification is given the exposure time in seconds (see page 11 of the January 1997 issue).

"COMA" = estimated coma diameter in minutes of arc; an ampersand (&) indicates an approximate estimate; an exclamation mark (!) precedes a coma diameter when the comet was not seen (*i.e.*, was too faint) and where a limiting magnitude estimate is provided based on an "assumed" coma diameter (a default size of 1' or 30" is recommended; cf. *ICQ* 9, 100); a plus mark (+) precedes a coma diameter when a diaphragm was used electronically, thereby specifying

diaphragm size (i.e., the coma is almost always larger than such a specified diaphragm size). "DC" = degree of condensation on a scale where 9 = stellar and 0 = diffuse (preceded by lower- and upper-case letters S and D to indicate the presence of stellar and disklike central condensations; cf. July 1995 issue, p. 90); a slash (/) indicates a value midway between the given number and the next-higher integer. "TAIL" = estimated tail length in degrees, to 0.01 degree if appropriate; again, an ampersand indicates a rough estimate. Lower-case letters between the tail length and the p.a. indicate that the tail was measured in arcmin ("m") or arcsec ("s"), in which cases the decimal point is shifted one column to the right. "PA" = estimated measured position angle of the tail to nearest whole integer in degrees (north = 0°, east = 90°). "OBS" = the observer who made the observation (given as a 3-letter, 2-digit code).

A complete list of the Keys to abbreviations used in the *ICQ* is available from the Editor for \$4.00 postpaid (available free of charge via e-mail); these Keys are also now available in the new *Guide to Observing Comets* and via the *ICQ*'s World Wide Web site. Please note that data in archival form, and thus the data to be sent in machine-readable form, use a format that is different from that of the Tabulated data in the printed pages of the *ICQ*; see pages 59-61 of the July 1992 issue, p. 10 of the January 1995 issue, and p. 100 of the April 1996 issue for further information [note correction on page 140 of the October 1993 issue]. Further guidelines concerning reporting of data may be found on pages 59-60 of the April 1993 issue, and in the *ICQ Guide to Observing Comets*.

◊ ◊ ◊

Key to observers with observations published in this issue, with 2-digit numbers between Observer Code and Observer's Name indicating source [07 = Comet Section, British Astronomical Assn.; 16 = Japanese observers (c/o Akimasa Nakamura, Kuma, Japan); 23 = Czech group (c/o P. Pravec and V. Znojil); 32 = Hungarian group (c/o K. Sarneckzy); 37 = Ukrainian Comet Section (c/o A. R. Baransky and K. I. Churyumov); 42 = Belarus observers, c/o V. S. Nevski, Vitebsk; etc.]. Those with asterisks (*) preceding the 5-character code are new additions to the Observer Key:

DESIGNATIONS OF RECENT COMETS

Listed below, for handy reference, are the last 35 comets to have been given designations in the new system. The name, preceded by a star (*) if the comet was a new discovery (compared to a recovery from predictions of a previously-known short-period comet) or a # if a re-discovery of a lost comet. Also given are such values as the orbital period (in years) for periodic comets, date of perihelion, T (month/date/year), and the perihelion distance (q , in AU). Four-digit numbers in the last column indicate the *IAU Circular* (4-digit number) containing the discovery/recovery or permanent-number announcement.

Not included below are numerous recently-discovered comets observed only with the ESA/NASA Solar and Heliospheric Observatory (SOHO) spacecraft — and seen only close to the sun with the SOHO instruments — that are presumed to be Kreutz sungrazers that are no longer in existence (see lists and references in October 1997 *ICQ*, p. 286; July 1998 *ICQ*, p. 160; April 1999 *ICQ*, p. 75; and July 1999 *ICQ*, p. 112); recent such SOHO discoveries were reported on *IAUC* 7349, 7364, 7367, 7370, 7376, and 7377 and include comets C/1999 E2, C/1999 O1, C/1999 O2, C/1999 O3, C/1999 P3, C/1999 P4, C/1999 P5, C/1999 Q1, C/1999 Q2, C/1999 Q3, C/1999 R3, C/2000 B1, C/2000 C6, C/2000 D1, and C/2000 E1. Other SOHO discoveries that were evidently *not* Kreutz sungrazers include C/1997 K2 (*IAUC* 7327), C/1998 G3 (*IAUC* 6952, 7343), C/1999 U2 (*IAUC* 7292), C/1999 Y2 (*IAUC* 7343), C/2000 C2 (*IAUC* 7364), C/2000 C3 (*IAUC* 7364), C/2000 C4 (*IAUC* 7364), and C/2000 C5 (*IAUC* 7364).

[This list updates that in the July 1999 issue, p. 112. For explanation regarding new usage of 'C/' instead of 'P/' for intermediate-period comets, see editorial note on page 2 of this issue.]
