COMET QUARTERLY

Whole Number 118	APRIL 2001	Vol. 23, No. 2
-------------------------	-------------------	-----------------------

SMITHSONIAN ASTROPHYSICAL OBSERVATORY
60 Garden Street • Cambridge, MA 02138 • U.S.A.

The International Comet Quarterly (*ICQ*) is a journal devoted to news and observation of comets, published by the Smithsonian Astrophysical Observatory in Cambridge, Massachusetts. Regular issues are published 4 times per year (January, April, July, and October), with an annual *Comet Handbook* of ephemerides published normally in the first half of the year as a special fifth issue. An index to each volume normally is published in every other October issue (even-numbered years); the *ICQ* is also indexed in *Astronomy and Astrophysics Abstracts* and in *Science Abstracts Section A*.

The regular (invoiced) subscription rate is US\$31.00 per year for surface-mail delivery (price includes the annual *Comet Handbook*; the price without the *Handbook* is US\$23.00 per year). Subscribers who do not wish to be billed may subscribe at the special rate of US\$23.00 per year for surface-mail delivery (rate is \$15.00 without *Handbook*). Add \$15.00/year to each of these rates for airmail delivery outside of the United States or for first-class delivery within the U.S. [The last set of digits (after the hyphen) on the top line of the mailing address label gives the Whole Number that signifies the last *ICQ* issue which will be sent under the current subscription status. An asterisk after these numbers indicates credit for the next annual *Comet Handbook*. The first five digits represent the subscriber's account number.] Make checks or money orders payable in U.S. funds (and drawn on a U.S. bank) to *International Comet Quarterly* and send to Mail Stop 18; Smithsonian Astrophysical Observatory; 60 Garden St.; Cambridge, MA 02138, U.S.A.

Credit cards may be used for payment of subscriptions, though a minimum of US\$20.00 can be accepted for each charge. Credit-card orders may be placed by e-mail (to *iausubs@cfa.harvard.edu*), by fax (to USA 617-495-7231), or by telephone (to USA 617-495-7280, generally between 14:00 and 21:00 UT, Monday to Friday). When sending orders by fax or e-mail, please include the following information: (1) your name (as given on the credit card); (2) card type (MasterCard, Visa, or Discover); (3) credit-card number and expiration date; (4) address at which the card is registered; (5) which services you wish to subscribe to; (6) if the payment is for the renewal of a current or expired account, please include your account number.

Group subscription rates available upon request. Back issues are \$6.00 each — except for "current" *Comet Handbooks*, which are available for \$15.00 (\$8.00 to subscribers if ordered with their *ICQ* subscription; see above). Up-to-date information concerning comet discoveries, orbital elements, and ephemerides can be obtained by subscribing to the *IAU Circulars* and/or the *Minor Planet Circulars* (via postal mail and also available via computer access); for further information, contact the above e-mail address (or the *ICQ* at the above postal address).

Cometary observations should be sent to the Editor in Cambridge; all data intended for publication in the *ICQ* that is not sent via computer electronic mail should be sent on standard *ICQ* observation report forms, which can be obtained upon request from the Editor. Those who can send observational data (or manuscripts) in machine-readable form are encouraged to do so [especially through e-mail via the computer networks *SPAN* (6700::DAN) or Internet (*ICQ@CFA.HARVARD.EDU*), or via floppy disks that can be read on an IBM PC], and should contact the Editor for further information. The *ICQ* has extensive information for comet observers on the World Wide Web, including the Keys to Abbreviations used in data tabulation (see URL <http://cfa-www.harvard.edu/icq/icq.html>). In early 1997, the *ICQ* published a 225-page *Guide to Observing Comets*; this edition is now out of print, but a revised edition is under preparation.

Most of the Observation Coordinators (OCs) listed below have e-mail contacts with the *ICQ* Editor; observers in the general area of such OCs who lack access to e-mail networks may send data to the OC for relay to the *ICQ* in electronic form.

Milan Antal (1935-1999)

Milan Antal, for many years a successful observer of the group working on interplanetary matter at the Skalnate Pleso Observatory, died suddenly on 1999 November 2 in a hospital in Piestany. Born in Zabreh, Moravia (now the Czech Republic), on 1935 September 19, young Milan was very interested in nature and especially in astronomical events. After final examination at a secondary school in Bratislava on June 1953, he began his professional career at the Skalnate Pleso Observatory. Under the leadership of the astronomers Prof. Guth and Prof. Kresák, Antal became a participant in the Skalnate Pleso program of visual comet hunting. After a short time, his careful measures of cometary and asteroidal positions attained a top quality. Antal was largely responsible for many thousands of positions of comets and minor planets published in the *IAU Circulars*, *Minor Planet Circulars*, and the *Contributions* of the Skalnate Pleso Astronomical Observatory. Antal discovered some asteroids, which he named for Slovakia, for his hometown in Piestany, for the famous Slovak poets Hviezdoslav and Sladkovic, for important leaders of the Slovak national uprising in the middle of the 19th century, and many others. Minor planet number 6717 carries his name.

After finishing his work at the Skalnate Pleso in 1978, Antal was for 10 years a collaborator of the Hurbanovo Observatory in Slovakia and occasionally he was a visiting observer also at observatories in Poland and Hungary. Milan Antal was particularly active in the Slovak Astronomical Society and for many years was the president of its division in Piestany.

Tabulation of Comet Observations

Important notice to contributors of CCD magnitudes. As more and more photometric observations of comets are made, it is becoming increasingly clear that we need to establish better standards for reporting such data. Effective immediately, we ask all CCD observers to include additional information regarding their observations, including both the measured coma diameter and the aperture within whose diameter (or perimeter) the tabulated total magnitude was determined. Until now, we have only allowed the observer to tabulate one of these data — the aperture size being noted by a plus (+) sign in column 49, indicating that the true coma diameter was in fact larger. Additional information would have to be supplied by accompanying descriptive information.

We plan later this year to reveal a newly-expanded *ICQ* format for observations, which will remain basically the same for the first 80 columns (to lessen confusion) but which will contain additional space beyond column 80 for CCD data. We also want observers to specify the CCD camera that they are using (brand name and type of chip), and also the software being used and whether or not a square or circular (or other-shaped) aperture was used for the total-magnitude determination. Until the new format is released, we will publish such additional information under the descriptive information. We plan to compile spectral-response curves for all CCD cameras in use, and to ask observers to contribute such information (either by sending graphs by postal mail or sending a URL pointing to a specific webpage). Such information will hopefully help in ascertaining how unfiltered CCD magnitudes might be used.

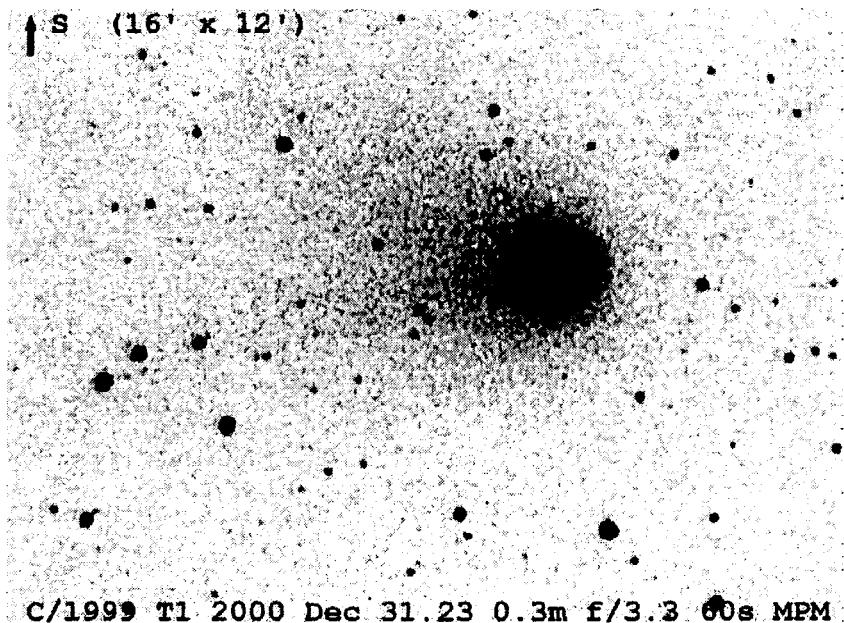

In this regard, while realizing that many observers will continue to contribute unfiltered CCD magnitudes, we encourage observers to use formal photometric filters — either standard narrowband comet filters or standard broadband filters (*B*, *V*, *R*, *I*, etc.). If observers must use unfiltered CCDs to obtain comet photometry, they need to be sure that they are using proper comparison-star magnitudes that are reasonably close to the peak spectral response of the CCD camera in use. Thus, an observer obtaining unfiltered CCD magnitudes of a comet with a CCD camera peaking in the red should *not* be using *V* magnitudes from a comparison-star catalogue. Note that there are very few good sources of standard *R* magnitudes (unlike the situation for *V* magnitudes), so observers must often go far from the comet field to get acceptable *R* magnitudes from comparison stars.

We also encourage CCD observers to attempt numerous exposures of a single comet on each night, obtaining photometric data for a variety of exposure times (from short, ‘astrometric’-length exposures to much longer exposures). And again we encourage all CCD observers of comets to contribute astrometry with each photometric set of measures, to ensure that the correct object has been observed.

Jan. 22.88: GUIDE 7.0 software used for comparison-star mags [YOS02]. Feb. 12.54: "comet has definitely undergone a dramatic fading; obs. with the Catalina 1.5-m reflector show a weakly condensed (DC = 1-2) 1.7' coma with hints of a broad extension towards p.a. 45°; R-band photometry on a co-added 2400-sec exposure suggests $m_1 = 15\text{-}16$; though the coma is slightly condensed, there is no discernable central nuclear region down to a limiting mag of 21.0; I tried to do some astrometry, but pinpointing the actual center of the coma was hard, so the astrometry is probably only good to 10"-20" (Feb. 12.52595, $\alpha = 16^{\text{h}}42^{\text{m}}40\text{s}.30$, $\delta = -18^{\circ}11'53\text{"}.1$ (MPC/CBAT code 693); Feb. 12.55316, $\alpha = 16^{\text{h}}42^{\text{m}}34\text{s}.56$, $\delta = -18^{\circ}11'54\text{"}.7$ (equinox 2000.0)" [HER02]. Mar. 3.61: "3-min unfiltered CCD images with the University of Canterbury's Mt. John Observatory 1-m f/7.7 telescope showed only a diffuse parabolic glow at the comet's expected position (the comet appears to have disintegrated); the 'head end' of the glow was brighter and $\approx 1'$ across; the 'tail', in p.a. 80°, was at least 10' long, and it widened to $\approx 2'$ across at the CCD frame edge; no stellar central cond. was found, though anything brighter than mag $R = 20$ should have been detected; estimated positions of the bright end of the glow are $\alpha = 15^{\text{h}}05^{\text{m}}55\text{s}$, $\delta = -15^{\circ}51'1$ (equinox 2000.0) on Mar. 3.60637, and $\alpha = 15^{\text{h}}05^{\text{m}}34\text{s}$, $\delta = -15^{\circ}50'1$ on Mar. 3.65990" [A. TABULATED DATA

The headings for the tabulated data are as follows: "DATE (UT)" = Date and time to hundredths of a day in Universal Time; "N" = notes [* = correction to observation published in earlier issue of the *ICQ*; an exclamation mark (!) in this same location indicates that the observer has corrected his estimate in some manner for atmospheric extinction (prior to September 1992, this was the standard symbol for noting extinction correction, but following publication of the extinction paper — July 1992 *ICQ* — this symbol is only to be used to denote corrections made using procedures different from that outlined by Green 1992, *ICQ* 14, 55-59, and in Appendix E of the *ICQ Guide to Observing Comets* — and then only for situations where the observed comet is at altitude > 10°); '&' = comet observed at altitude 20° or less with no atmospheric extinction correction applied; '\$' = comet observed at altitude 10° or lower, observations corrected by the observer using procedure of Green (*ibid.*); for a correction applied by the observer using Tables Ia, Ib, or Ic of Green (*ibid.*), the letters 'a', 'w', or 's', respectively, should be used; x indicates that a secondary source (often amateur computer software) was used to get supposedly correct comparison-star magnitudes from an accepted catalogue].

"MM" = the method employed for estimating the total (visual) magnitude; see article on page 186 of the Oct. 1996 issue [B = VBM method, M = Morris method, S = VSS or In-Out method, I = in-focus, C = unfiltered CCD, c = same as 'C', but for 'nuclear' magnitudes, V = electronic observations — usually CCD — with Johnson V filter, etc.]. "MAG." = total (visual) magnitude estimate; a colon indicates that the observation is only approximate, due to bad weather conditions, etc.; a left bracket ([]) indicates that the comet was not seen, with an estimated limiting magnitude given (if the comet IS seen, and it is simply estimated to be fainter than a certain magnitude, a "greater-than" sign (>) must be used, not a bracket). "RF" = reference for total magnitude estimates (see pages 98-100 of the October 1992 issue, and Appendix C of the *ICQ Guide to Observing Comets*, for all of the 1- and 2-letter codes; an updated list is also maintained at the *ICQ World Wide Website*). "AP." = aperture in centimeters of the instrument used for the observations, usually given to tenths. "T" = type of instrument used for the observation (R = refractor, L = Newtonian reflector, B = binoculars, C = Cassegrain reflector, A = camera, T = Schmidt-Cassegrain reflector, S = Schmidt-Newtonian reflector, E = naked eye, etc.). "F/" and "PWR" are the focal ratio and power or magnification, respectively, of the instrument used for the observation — given to nearest whole integer (round even); note that for CCD observations, in place of magnification is given the exposure time in seconds [see page 11 of the January 1997 issue; a lower-case "a" indicates an exposure time under 1000 seconds, an upper-case "A" indicates an exposure time of 1000-1999 seconds (with the thousands digit replaced by the "A"), an upper-case "B" indicates an exposure time of 2000-2999 seconds (with the thousands digit replaced by the "B"), etc.].

"COMA" = estimated coma diameter in minutes of arc; an ampersand (&) indicates an approximate estimate; an exclamation mark (!) precedes a coma diameter when the comet was not seen (*i.e.*, was too faint) and where a limiting magnitude estimate is provided based on an "assumed" coma diameter (a default size of 1' or 30" is recommended; cf. *ICQ* 9, 100); a plus mark (+) precedes a coma diameter when a diaphragm was used electronically, thereby specifying the diaphragm size (*i.e.*, the coma is almost always larger than such a specified diaphragm size). "DC" = degree of condensation on a scale where 9 = stellar and 0 = diffuse (preceded by lower- and upper-case letters S and D to indicate the presence of stellar and disklike central condensations; cf. July 1995 issue, p. 90); a slash (/) indicates a value midway between the given number and the next-higher integer. "TAIL" = estimated tail length in degrees, to 0.01 degree if appropriate; again, an ampersand indicates a rough estimate. Lower-case letters between the tail length and the p.a. indicate that the tail was measured in arcmin ("m") or arcsec ("s"), *in which cases the decimal point is shifted one column to the right*. "PA" = estimated measured position angle of the tail to nearest whole integer in degrees (north = 0°, east = 90°). "OBS" = the observer who made the observation (given as a 3-letter, 2-digit code).

A complete list of the Keys to abbreviations used in the *ICQ* is available from the Editor for \$4.00 postpaid (available free of charge via e-mail); these Keys (with the exception of the Observer Codes) are also now available in the new *Guide to Observing Comets* and via the *ICQ's World Wide Web site*. Please note that data in archival form, and thus the data

to be sent in machine-readable form, use a format that is different from that of the Tabulated data in the printed pages of the ICQ; see pages 59-61 of the July 1992 issue, p. 10 of the January 1995 issue, and p. 100 of the April 1996 issue for further information [note correction on page 140 of the October 1993 issue]. Further guidelines concerning reporting of data may be found on pages 59-60 of the April 1993 issue, and in the ICQ Guide to Observing Comets.

DESIGNATIONS OF RECENT COMETS

Listed on this page and the next, for handy reference, are the last 35 comets to have been given designations in the new system. The name, preceded by a star (*) if the comet was a new discovery (compared to a recovery from predictions of a previously-known short-period comet) or a # if a re-discovery of a 'lost' comet. Also given are such values as the orbital period (in years) for periodic comets, date of perihelion, T (month/date/year), and the perihelion distance (q , in AU). Four-digit numbers in the last column indicate the *IAU Circular* (4-digit number) containing the discovery/recovery or permanent-number announcement.

Not included below are numerous recently-discovered comets observed only with the SOHO spacecraft — and seen only close to the sun with the SOHO instruments — that are presumed to be Kreutz sungrazers that are no longer in existence [see the list and references in the October 2000 issue (p. 149)]; recent such SOHO discoveries were reported on *IAUC* 7548, 7558, 7560, 7562, 7565, 7567, 7572, 7573, 7580, 7582, 7601, 7606, 7612, 7613, 7631, 7634, 7641, 7642, 7646, 7650, and 7655, and include comets C/1996 L1; C/1997 B3, K7, M5, S3, and W3; C/1998 B2, U6, V2, V3, V4, V5, V6, V7, W4, W5, W6, X9, X10, and X11; C/2000 A2, H3, H4, H5, J6, J7, K7, K8, L6, N3, W2, W3, W4, W5, X1, X2, X3, X4, X5, X6, X7, X8, Y4, Y5, Y8, and Y9; and C/2001 A3, A4, B3, C2, C3, C4, C6, F2, G2, G3, H1, H2, H3, H4, H6, H7, J2, J3, J4, K2, K4, K6, K7, K8, K9, L1, L2, L3, L4, L5, L6, L7, L8, L9, M2, M3, M4, M5, M6, M7, M8, and M9. SOHO comets C/2000 Y6 and C/2000 Y7 appear to be two components of an earlier single non-Kreutz comet (*IAUC* 7567); also, SOHO comets C/2001 C5 (*IAUC* 7585) and C/2001 E1 (*IAUC* 7613) do not appear to be of the Kreutz sungrazing type.

[This list updates that in the October 2000 issue, p. 149. For explanation regarding new usage of 'C/' instead of 'P/' for intermediate-period comets, see editorial note on page 2 of the January 2000 issue.]
